## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

What Is Claimed Is:

1. An automatic transaction apparatus for communicating with a Web server and performing guide display  
5 and a transaction operation according to an operation of a user, comprising:

a display unit for performing said guide display;

a plurality of I/O units for performing said transaction operation; and

10 a control unit for controlling the guide display of the screen of said display unit according to a screen content from said Web server, and controlling said plurality of I/O units according to objects embedded in said screen content,

15 wherein said control unit calls up a method for each processing of said transaction operation for controlling the synchronization of said plurality of I/O units by a script of said object, and controls the synchronization of said plurality of I/O units.

20 2. The automatic transaction apparatus according to Claim 1, wherein said control unit has a browser which interprets a screen content from said Web server and performs said guide display, and also interprets a script of said  
25 object embedded in said screen content and calls up a method for each processing of said transaction operation for controlling the synchronization of said plurality of I/O

units, and controls the synchronization of said plurality of I/O units from said browser.

3. The automatic transaction apparatus according to  
5 Claim 1, wherein said control unit transmits a request to said Web server according to a post request by said called up method.

4. The automatic transaction apparatus according to  
10 Claim 1, wherein said control unit receives a screen content which has a screen creation program described by a page description language, a script of said object, and a method program called up by said script.

15 5. The automatic transaction apparatus according to Claim 1, wherein said control unit issues an operation command to said plurality of I/O units by said called up method, and receives a reply from said I/O units.

20 6. The automatic transaction apparatus according to Claim 1, wherein said plurality of I/O units comprises at least a cash processing unit and a card processing unit.

7. The automatic transaction apparatus according to  
25 Claim 1, wherein said control unit specifies said plurality of I/O units for which synchronization is controlled by said method according to input parameters attached to said script.

8. The automatic transaction apparatus according to Claim 4, wherein said browser creates said guide screen by a screen creation program described by a page description language of said screen content, calls up said method program from the script of said object, and controls the synchronization of said plurality of I/O units.

9. The automatic transaction apparatus according to Claim 8, wherein said browser creates said guide screen by a screen creation program described by the page description language of said screen content, calls up a method program of an applet from said applet specification and method specification of the script of said object, and controls the synchronization of said plurality of I/O units.

10. The automatic transaction apparatus according to Claim 5, wherein said browser issues an operation command to a plurality of I/O controllers for controlling each of said I/O units by said called-up method, and receives a reply from said I/O controllers.

11. An automatic transaction system comprising:  
a Web server; and  
an automatic transaction apparatus which is connected to said Web server via a network for communicating with said Web server and performing guide display and a transaction

operation according to an operation of a user,

wherein said automatic transaction apparatus comprises:

a display unit for performing said guide display;

a plurality of I/O units for performing said

5 transaction operation; and

a control unit for controlling the guide display

of the screen of said display unit according to a screen

content from said Web server, and controlling said plurality

of I/O units according to objects embedded in said screen

10 content, and

wherein said control unit calls up a method for each

processing of said transaction operation for controlling the

synchronization of said plurality of I/O units by a script of

said object, and controls the synchronization of said

15 plurality of I/O units.

12. The automatic transaction system according to

Claim 11, wherein said control unit of said automatic

transaction apparatus comprises a browser which interprets a

20 screen content from said Web server and performs said guide

display, and also interprets the script of said object

embedded in said screen content and calls up a method for

each processing of said transaction operation for controlling

the synchronization of said plurality of I/O units, and

25 controls the synchronization of said plurality of I/O units

from said browser.

13. The automatic transaction system according to Claim 11, wherein said control unit transmits a request to said Web server according to a post request by said called up method.

5

14. The automatic transaction system according to Claim 11, wherein said Web server transmits a screen content which has a screen creation program described by a page description language, the script of said object, and a method  
10 program called up by said script to said automatic transaction apparatus.

15. The automatic transaction system according to Claim 11, wherein said control unit issues an operation  
15 command to said plurality of I/O units by said called up method, and receives a reply from said I/O units.

16. The automatic transaction system according to Claim 11, wherein said plurality of I/O units comprises at  
20 least a cash processing unit and a card processing unit.

17. The automatic transaction system according to Claim 11, wherein said Web server attaches input parameters, for specifying a plurality of I/O units for which  
25 synchronization is controlled by said method, to said script, sends the same to said automatic transaction apparatus, and said control unit specifies the plurality of I/O

units for which synchronization is controlled by said method according to the input parameters attached to said script.

18. The automatic transaction system according to  
5 Claim 14, wherein said browser creates said guide screen by a screen creation program described by the page description language of said screen content, calls up said method program from the script of said object, and controls the  
10 synchronization of said plurality of I/O units.

19. The automatic transaction system according to  
Claim 18, wherein said browser creates said guide screen by a screen creation program described by the page description language of said screen content, calls up a method of an  
15 applet from the applet specification and method specification of the script of said object, and controls the synchronization of said plurality of I/O units.

20. The automatic transaction system according to  
20 Claim 15, wherein said browser issues an operation command to a plurality of I/O controllers for controlling each of said I/O units by said called up method, and receives a reply from said I/O controllers.
